Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Enteric-coated Hydroxypropyl Methylcellulose Empty Capsules competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Enteric-coated Hydroxypropyl Methylcellulose (HPMC) empty capsules are plant-derived capsules made from hydroxypropyl methylcellulose, coated with an enteric layer that remains stable in acidic gastric conditions and dissolves selectively in the higher pH environment of the small intestine. They exhibit excellent biocompatibility and safety, making them suitable for encapsulating acid-sensitive or gastric-labile active pharmaceutical ingredients, probiotics, enzymes, and other functional compounds. Compared with traditional gelatin capsules, HPMC capsules are free of animal-derived ingredients, suitable for vegetarians and individuals with allergies to animal proteins. They are widely used in both pharmaceutical and nutraceutical formulations, particularly for oral dosage forms requiring precise control over release site and timing. In 2024, the global sales volume of enteric-coated hydroxypropyl methylcellulose (HPMC) empty capsules reached 103.5 billion capsules, with an average price of 31 USD per 10,000 capsules.
