Abstracts

Enterprise Imaging is defined as a set of strategies, initiatives, and workflows implemented across a healthcare enterprise to consistently and optimally capture, index, manage, store, distribute, view, exchange, and analyze all clinical imaging and multimedia content to enhance the electronic health record. Enterprise imaging solution is an ongoing process to merge your patient's entire clinical record with their medical record, including images, and make this data available where and when it is needed. The growing demand for vendor neutral archives (VNAs) in the healthcare sector, as they offer improved compatibility with older systems and longer lifecycle management¹. VNAs also enable the standardization and universalization of medical image management across different departments and facilities. The increasing adoption of cloud-based digital archives for storing and accessing medical images and multimedia content, as they offer lower costs, higher scalability, and better security than on-premise solutions. The rising need for a collaborative platform that allows easy sharing and exchange of medical images and patient data among clinicians, radiologists, and other healthcare professionals, especially during the COVID-19 pandemic. This platform also enables task automation, real-time remote reporting, and enhanced productivity and patient care coordination. The growing digitization of the healthcare sector and the acceptance of value-based care pay model in various countries, which encourage the implementation of enterprise imaging solutions to improve the quality and efficiency of healthcare services.

The global Enterprise Imaging Solution market size was estimated at USD 4214.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 12.10% during the forecast period.
