Report Overview:

Enterprise Semantic Search Software is a type of software that enables enterprises to use semantics to locate and retrieve data from within their internal networks. Semantics is the study of meaning and relationships between words, concepts, and entities. Semantic search software can understand the context and intent of a query, rather than just matching keywords, and provide more relevant and accurate results. For example, if a user searches for “apple”, semantic search software can distinguish between the fruit and the company based on the user’s profile, preferences, and previous searches.
