Abstracts

Environmental barrier coatings are special ceramic coatings applied to the surfaces of high-temperature components in aero-engines and gas turbines. They are primarily used to protect silicon carbide ceramic matrix composites or nickel-based alloy substrates from high-temperature water-oxygen corrosion, molten salt erosion, and particle scouring. In the engine operating environment, silicon-based non-oxide ceramics readily react with water vapor to form volatile silicon hydroxide, leading to size reduction and performance degradation. Environmental barrier coatings establish a physical and chemical barrier between high-temperature structural materials and the harsh engine environment. Through their low oxygen permeability, matched coefficient of thermal expansion, good phase stability, and chemical compatibility with the substrate, they effectively prevent or reduce the impact of the environment on material properties, significantly improving the stability and service life of components under harsh environments such as high temperatures, corrosive media, and high-speed airflow scouring. The environmental barrier coating market has broad prospects and is expected to maintain steady growth in the coming years. This growth is mainly driven by continuous global R&D investment in high thrust-to-weight ratio aero engines and high-efficiency gas turbines, which is fueling demand for advanced coatings capable of stable operation at temperatures of 1400°C or even higher. Meanwhile, innovations in coating material systems, such as the development and application of third-generation rare-earth silicate surface materials due to their lower SiO₂ activity and excellent high-temperature phase stability, will further enhance the protective capabilities and reliability of EBCs in ultra-high temperature environments. Furthermore, the expanding application of SiC ceramic matrix composites in hot-end components of aero engines, along with increasingly sophisticated testing and evaluation technologies, jointly create significant development opportunities for the environmental barrier coating industry.

The global Environmental Barrier Coating market size was estimated at USD 862.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.20% during the forecast period.
