Report Overview

Environmentally friendly anti dripping agent is a special modified polytetrafluoroethylene particle added to the formula of thermoplastic plastics, which increases melt strength and bending modulus, flame retardant and anti dripping effect, and helps thermoplastic materials achieve higher flame retardant standards. Compared with ordinary polytetrafluoroethylene, it has excellent dispersibility and ease of operation, does not agglomerate at room temperature, injectable products do not wrinkle, black and white products have no crystal points, and the improvement of product surface glossiness is particularly significant. Due to good compatibility, the impact strength is less affected in high impact formulations.

The global Environmental Friendly Anti Dripping Agent market size was estimated at USD 185.4 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 7.85% during the forecast period.
