Abstracts

An environmental plasticizer is a chemical additive specifically designed to increase the flexibility, durability, and workability of polymers?most commonly polyvinyl chloride (PVC)?while meeting stringent environmental and health safety standards, as it is free from hazardous substances such as phthalates, heavy metals, or other toxic compounds that are characteristic of conventional plasticizers. These alternatives are typically derived from renewable, bio-based sources such as vegetable oils, citrates, or succinates, or are synthesized to be non-toxic, biodegradable, and low in volatile organic compound (VOC) emissions, aligning with global regulatory frameworks and sustainability goals aimed at reducing ecological footprints and human health risks associated with plastic products.

The global Environmental Plasticizer market size was estimated at USD 11500.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 5.50% during the forecast period.
