## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Environmentally Friendly Insulated RMU competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Environmentally Friendly Insulated RMU include Solid and Air RMU. A Solid Insulated RMU is a medium-voltage switchgear system in which all live components and busbars are fully encapsulated in solid dielectric materials, such as epoxy resin. It eliminates the use of greenhouse gases like SF<sub>6</sub> (sulfur hexafluoride), making it eco-friendly and maintenance-free. Solid insulation provides high dielectric strength, compact size, and arc protection, ideal for use in smart grids, renewable energy integration, and urban distribution networks. An Air Insulated RMU uses air as the primary insulation medium between live parts. It is typically constructed with open-air gaps and physical barriers to maintain dielectric clearance. While larger in size compared to solid or gas-insulated RMUs, air-insulated systems are simple, cost-effective, and free from harmful gases. They are considered environmentally friendly due to the absence of SF<sub>6</sub> and ease of end-of-life disposal. In 2024, global Solid Insulated RMU production reached approximately 170,000 units, with an average global market price of around US\$ 10,000 per unit.

The global Environmentally Friendly Insulated RMU market size was estimated at USD 1724.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 7.30% during the forecast period.
