## Abstracts

Environmentally Friendly Microcapsules Technology involves the encapsulation of active ingredients within small, biodegradable polymer shells. These microcapsules can deliver drugs, nutrients, pesticides, or other active compounds in a controlled and targeted manner. The technology has various applications in pharmaceuticals, agriculture, food, and cosmetics. Environmentally Friendly Microcapsules Technology is a technique that achieves controlled release and functional protection by encapsulating active substances within minute capsules made from biodegradable or environmentally sound materials. The upstream segment of the industrial chain comprises suppliers of active substances (such as fragrances, pesticides, pharmaceutical ingredients, or functional chemicals), alongside providers of polymeric materials and biodegradable substances. Midstream involves microcapsule manufacturers employing processes such as emulsion polymerisation, spray drying, and solution gelation to produce microcapsules, alongside quality control and performance optimisation. Downstream encompasses application enterprises in cosmetics, pharmaceuticals, pesticides, coatings, and functional foods, which integrate microcapsule products into final goods to achieve sustained release, protective, or functional enhancement properties. The entire chain emphasises the environmental sustainability of raw materials, the controllability of preparation processes, and the safety and efficacy of downstream applications.

The global Environmentally Friendly Microcapsules Technology market size was estimated at USD 105.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.20% during the forecast period.
