## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Enzyme Responsive Biodegradable Polymers competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global enzyme responsive biodegradable polymers production reached approximately 40,470 tons, with an average global market price of around USD 3,000 per ton. A factory gross profit of USD 840 per ton with 28% gross margin. A single line full machine capacity production is around 500 ton per line per year. downstream demand is concentrated in healthcare & pharmaceutical followed by specialty packaging, agriculture, coatings and research/industrial uses. A PHA-based nanoparticle is formulated to encapsulate an anticancer drug and decorated with a peptide substrate cleavable by tumor-overexpressed proteases. Enzyme-responsive biodegradable polymers are materials that degrade over time due to the action of enzymes, breaking down into simpler, environmentally friendly components like carbon dioxide, water, and biomass. These polymers are designed to be broken down by specific enzymes, leading to changes in their structure and properties, such as swelling or degradation, which can be triggered under specific conditions like those found in the body. This makes them useful in applications like controlled drug delivery, where an enzyme at a target site can trigger the release of a therapeutic agent as the polymer degrades.

The global Enzyme Responsive Biodegradable Polymers market size was estimated at USD 121.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 11.40% during the forecast period.
