Abstracts

Enzymes in the pulp and paper industry refer to specialized biological catalysts?primarily cellulases, xylanases, lignin-modifying enzymes, amylases, and lipases?used to enhance the efficiency, sustainability, and cost-effectiveness of various stages in paper production, including pulping, bleaching, deinking, and drainage improvement, by replacing or reducing the need for harsh chemicals, lowering energy consumption, and minimizing environmental impact. The market for these enzymes is driven by increasing regulatory pressure to adopt eco-friendly manufacturing processes, rising demand for recycled paper products, and the industry?s focus on operational efficiency and cost reduction, with key applications spanning biomechanical pulping, bleach boosting, fiber modification, and deposit control. Growth is further supported by advancements in enzyme engineering and formulation technologies, which enable more stable and effective performance under industrial conditions, while regional expansion is influenced by the maturity of paper industries in North America and Europe and rapid industrialization in Asia-Pacific, particularly in countries like China and India, where both production scale and environmental regulations are evolving.
