Abstracts

EPDM cold shrink tubing is a pre-expanded, cross-linked elastomeric tubing typically made from ethylene propylene diene monomer (EPDM) rubber, designed to provide environmental sealing, electrical insulation, and mechanical protection for cable splices, terminations, and other connections in electrical, telecommunications, and infrastructure applications; it is installed without heat or specialized tools by simply removing a supporting core, allowing the memory-retentive material to contract tightly and uniformly around substrates, even on irregular shapes, offering advantages such as resistance to UV, ozone, moisture, and a wide temperature range, making it suitable for outdoor, underground, and harsh environments where reliability and long-term performance are critical.

The global Epdm Cold Shrink Tubing market size was estimated at USD 125.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.85% during the forecast period.
