Report Overview

The epitaxy susceptor is a critical component in semiconductor manufacturing, specifically in epitaxial growth processes such as chemical vapor deposition (CVD) and metal-organic CVD (MOCVD). It serves as a substrate holder that ensures uniform heat distribution and structural stability during high-temperature deposition of thin films on wafers. Typically made from high-purity graphite, silicon carbide (SiC), or coated materials to withstand extreme conditions, susceptors must exhibit excellent thermal conductivity, minimal contamination risk, and long-term durability. Their design and material composition directly impact film uniformity, defect rates, and production yield, making them indispensable in the fabrication of advanced semiconductor devices, including LEDs, power electronics, and optoelectronic components. The market for epitaxy susceptors is driven by the growing demand for high-performance semiconductors, miniaturization trends, and the expansion of 5G, electric vehicles, and IoT applications.

The global Epitaxy Susceptor market size was estimated at USD 198.97 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 5.50% during the forecast period.
