Report Overview

An epoxy coating is a coating compound consisting of two distinct elements: an epoxy resin and a polyamine hardener (also known as a catalyst). When mixed, the resin and hardener engage in a chemical reaction that creates cross-linking of the elements as it cures. When the epoxy coating is fully cured, the resulting product is a durable, rigid plastic coating with numerous desirable mechanical properties. Epoxy coatings are renowned for their outstanding mechanical properties, such as hardness and durability, and abrasion, impact and chemical resistance. These attributes make epoxy coatings an ideal protective coating material for components in demanding industrial settings.
