Abstracts

Epoxy-based intumescent coatings are advanced fire protection materials designed to safeguard structural steel in high-risk industrial environments. These coatings consist of a two-component epoxy system that, upon exposure to high temperatures, undergoes a chemical reaction causing the material to expand and form a thick, insulating char layer. This char layer acts as a thermal barrier, delaying heat transfer to the underlying steel and thereby maintaining its structural integrity during fire incidents. Epoxy-based intumescent coatings are particularly suited for harsh conditions found in sectors like oil and gas, petrochemical, and marine industries, offering robust resistance to corrosion, chemicals, and mechanical damage.

The global Epoxy-based Intumescent Coating market size was estimated at USD 725.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 3.30% during the forecast period.

This report offers a comprehensive and in-depth analysis of the global Epoxy-based Intumescent Coating market, covering all critical facets from a broad macroeconomic overview to detailed micro-level insights.
