Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Epoxy Core-Shell Toughening Agents competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global sales of epoxy core-shell toughening agents reached 36,223 tons, with an average selling price of \$9,014 per ton. Epoxy core-shell toughening agents are high-molecular-weight polymer composite particles with a special bilayer or multilayer structure. Their structure typically consists of an inner "core" and an outer "shell." The core layer is usually a flexible rubbery polymer (such as polybutadiene or polybutylene acrylate), responsible for absorbing impact energy; the shell layer is a thermoplastic polymer with a high glass transition temperature (such as polymethyl methacrylate or polystyrene) and often contains functional groups that can participate in reactions. This unique core-shell structure allows the toughening agent to be uniformly dispersed in the epoxy resin matrix at nanoscale dimensions (typically in the range of 48-200 nm), forming a stable, semi-transparent dispersion. The raw materials for epoxy core-shell toughening agents mainly consist of a rubber core (flexible polymers such as polybutadiene (PB) or polyacrylate (PBA), a plastic shell (rigid polymers such as polymethyl methacrylate (PMMA) or polystyrene (PS),) and functional additives (initiators, emulsifiers, crosslinking agents). Some high-end products also incorporate nano-SiO₂ and POSS for organic-inorganic hybrid modification. Raw materials account for 45-55% of the cost structure, with the price fluctuations of petrochemical raw materials butadiene and MMA significantly impacting costs. The manufacturing process enjoys a 35-45% gross profit margin due to technological barriers (precise particle size control of 5-10nm, shell functionalization design), but high-end products still rely on imports, with domestic production mainly concentrated in the low-end market.

The global Epoxy Core-Shell Toughening Agents market size was estimated at USD 327.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.80% during the forecast period.
