Abstracts

Epoxy glass steel pipe, also known as glass fiber reinforced epoxy (GRE) pipe, is a composite material manufactured by winding continuous glass fibers impregnated with epoxy resin around a rotating mandrel, followed by curing to form a high-strength, corrosion-resistant cylindrical structure designed for fluid transport in aggressive environments. It combines the mechanical strength of glass fiber with the chemical resistance and adhesion properties of epoxy resin, offering advantages over traditional materials like steel, stainless steel, or plastics in applications involving corrosive media, high temperatures, or where weight reduction is critical. These pipes are characterized by their lightweight nature, long service life, low maintenance requirements, and suitability for industries such as oil and gas, chemical processing, water treatment, and marine engineering.

The global Epoxy Glass Steel Pipe market size was estimated at USD 450.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.80% during the forecast period.
