This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Epoxy Hardener competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Epoxy Hardener, also called epoxy curing agent. The curing process is a chemical reaction in which the epoxide groups in epoxy resin reacts with a curing agent (hardener) to form a highly crosslinked, three-dimensional network. In order to convert epoxy resins into a hard, infusible, and rigid material, it is necessary to cure the resin with hardener. The products are available for a wide range of civil engineering, infrastructure and other building & construction applications. Epoxy Hardener is mainly classified into the following types: amine based, anhydrides based and other products, amine type is the most widely used type which takes up about 74% of the total sales. Epoxy Hardener has wide range of applications, such as coatings, construction, adhesives, composites, etc. And coating was the most widely used area which took up about 34% of the global total. Asia Pacific is the largest region of Epoxy Curing Agents in the world in the past few years and it will keep increasing in the next few years.
