Abstracts

Epoxy resin copper-clad laminates, also known as copper-clad circuit boards or copper-clad laminates, are composite materials made by bonding a copper sheet to a base material, such as glass fiber-reinforced epoxy resin sheet, using epoxy resin as the adhesive. They are widely used in printed circuit boards and other electronic components due to their excellent electrical conductivity, heat resistance, dimensional stability, and mechanical strength. With the development of the electronics industry, especially the development of 5G, automotive electronics, Internet of Things, driverless and other fields, the demand for copper clad laminates continues to grow, so the demand for epoxy resin copper clad laminates is also increasing. Under the pressure of environmental protection and sustainable development, manufacturers of epoxy resin copper clad laminates have begun to adopt more environmentally friendly materials and production processes to reduce their impact on the environment. For example, some manufacturers have started to use water-based paints instead of traditional solvent-based paints to reduce VOCs emissions.

The global Epoxy Resin Copper-Clad Laminates market size was estimated at USD 4748.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.60% during the forecast period.
