Abstracts

Epoxy resin thermal conductive potting glue is a protective material specially designed for electronic components and circuit boards. It combines the excellent mechanical properties and high thermal conductivity of epoxy resin, and can form a strong protective layer with good thermal conductivity after curing. This potting glue is mainly used to fill and seal the gaps between electronic components, effectively conduct the heat generated inside, prevent damage caused by overheating, and provide multiple protection functions such as moisture-proof, corrosion-proof, and earthquake-proof. Epoxy resin thermal conductive potting glue is widely used in LED lamps, power modules, automotive electronics and other fields to ensure the reliability and long life of electronic equipment in complex environments. The development trend of epoxy resin thermal conductive potting glue is moving towards high performance and multifunctionality. Future products will pay more attention to improving thermal conductivity and reducing thermal resistance while maintaining good mechanical properties and chemical stability. In addition, increasingly stringent environmental regulations have prompted manufacturers to develop halogen-free, low-volatile organic compound (VOC) green products. With the trend of electronic products towards miniaturization and lightweight, the requirements for potting glue are also increasing, including better fluidity and the ability to adapt to complex shapes, as well as higher temperature resistance and anti-aging performance to meet the needs of emerging markets such as electric vehicles, 5G communication equipment and high-performance computing equipment.

The global Epoxy Resin Thermal Conductive Potting Glue market size was estimated at USD 368.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 7.20% during the forecast period.
