Abstracts

Epoxy self-leveling concrete refers to a specialized two-part polymer-modified cementitious system where a resin-based epoxy binder is combined with fine aggregates and additives to create a pourable, self-smoothing flooring solution that cures into a seamless, high-strength, and chemically resistant surface. Unlike traditional concrete, this material leverages the properties of epoxy to achieve minimal shrinkage, exceptional adhesion to substrates, and a flat, glossy finish without the need for extensive manual troweling, making it particularly suitable for industrial, commercial, and residential applications where durability, hygiene, and aesthetic uniformity are critical.

The global Epoxy Self Leveling Concrete market size was estimated at USD 520.75 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 5.20% during the forecast period.
