Report Overview

Breeding organizations have been exchanging large amounts of breeding stock internationally for many years. Significant advancements in reproduction methods, including the use of refrigerated and frozen semen, have made it possible for breeding stallions to be used concurrently in several nations. While countries with small populations frequently import breeding stock, those with large sport horse populations, like Germany and France, frequently export sport horses. Horse breeds are chosen based on the animal's ancestry, athletic accomplishments, and temperament. The cost of a stallion's sperm is the deciding factor when selecting a sire. Moreover, the sexing of sperm, low-dose deep intrauterine insemination, and intracytoplasmic sperm injection are recent developments in horse insemination.
