The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Equine Chorionic Gonadotropin (eCG) competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global Equine Chorionic Gonadotropin production reached approximately 31.47 million units, with an average global market price of around US\$8.5 per unit. Equine chorionic gonadotropin (eCG), also known as pregnant mare serum gonadotropin (PMSG) or equine luteinizing hormone. Equine chorionic gonadotropin is a gonadotropic hormone produced in the chorion of pregnant mares. It is a glycoprotein hormone secreted by fetal-origin trophoblastic epithelial cells that form the endometrial cups. Equine Chorionic Gonadotropin (eCG) is a highly active biological hormone widely used in animal reproduction management and livestock production. With the modernization and intensification of global livestock farming, there is increasing demand to improve reproductive efficiency and overall productivity, which has steadily expanded the eCG market. In addition, the growing adoption of research techniques and in vitro fertilization has further promoted the application of eCG in scientific studies and assisted reproductive technologies. In the future, improvements in manufacturing processes and quality control are expected to enhance the stability and safety of eCG products, providing more efficient reproductive management tools for the livestock industry. Moreover, trends such as animal welfare, sustainable farming practices, and biotechnological innovations are likely to drive the development of eCG toward higher purity, greater biological activity, and customized formulations, creating new market opportunities. Overall, the eCG market demonstrates strong growth potential, with expanding application areas and significant room for technological advancement. Its role in optimizing animal reproduction and supporting modern farming practices ensures

continued relevance and demand in the evolving livestock industry.

The global Equine Chorionic Gonadotropin (eCG) market size was estimated at USD 269.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.80% during the forecast period.
