Medium Voltage Direct Current (MVDC) is a technology that converts medium voltage power from 1.5kV to 100kV into direct current. Compared with AC power transmission, it has the advantage of less energy loss, so it has attracted much attention as a next-generation power supply method. In particular, if MVDC is applied to large electric propulsion ships, the overall efficiency of electric energy can be improved by up to 20% compared to the existing AC power system. Furthermore, the work developed the concepts of an MVDC substation for converting and integrating high voltage transmission into the distribution network, while interconnecting medium voltage synchronous and DC generation resources. MVDC Equipment includes medium voltage DC circuit breakers, inverters, converters, transformer, switchgear, power router etc.
