Abstracts

Erbium Isopropoxide is an organometallic compound, which is a useful precursor material for the manufacture of drugs and catalysts. Commonly used in chemical, film deposition, pharmaceutical and other industries. Its chemical formula is $C_9H_{21}ErO_3$, color is white to pink, powder. The market trend for Erbium Isopropoxide, an erbium-containing chemical compound, was influenced by its application in the production of erbium-doped optical materials and advanced ceramics. Erbium is valued for its unique optical properties, making it essential in telecommunications for amplifying signals in optical fibers and in laser systems. Erbium Isopropoxide served as a precursor for these materials, particularly erbium-doped glass fibers used in high-speed data transmission networks. The market trend was closely linked to the expansion of telecommunications infrastructure, the ongoing demand for high-capacity data transmission, and the growth of the 5G network. Additionally, research into erbium-doped materials for photonic applications and the development of erbium-based ceramic materials for various technologies, including phosphors for displays and LED lighting, contributed to the demand.

The global Erbium Isopropoxide market size was estimated at USD 71.6 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.90% during the forecast period.
