Report Overview

ERKs (Extracellular Signal-Regulated Kinases, extracellular signal-regulated kinases) activity assay kit is an experimental kit used to detect the activity of ERKs kinases in cells. ERKs are a type of mitogen-activated protein kinases (MAPKs) that participate in regulating biological processes such as cell proliferation, differentiation, and apoptosis, and are an important component of cell signaling pathways. ERKs activity assay kits typically include a series of reagents and kits for determining ERKs kinase activity levels from cell extracts. These kits usually use immunology, enzyme activity detection and other techniques to indirectly measure the activity of ERKs kinases by measuring the phosphorylation level of the ERKs kinase substrate or its ability to phosphorylate the substrate.
