Abstracts

An ESD (Electrostatic Discharge) anti-static work chair is a specialized ergonomic seating solution designed for use in environments where electrostatic discharge poses a risk to sensitive electronic components, equipment, or flammable materials. These chairs incorporate conductive or dissipative materials?such as carbon fibers, conductive casters, or grounding straps?to safely channel static electricity away from the user and into a grounded floor, thereby preventing the buildup and sudden release of static charges that could damage products or disrupt manufacturing processes. Typically used in electronics manufacturing, laboratories, data centers, cleanrooms, and assembly lines, ESD chairs must comply with industry standards (e.g., ANSI/ESD S20.20 or IEC 61340-5-1) to ensure consistent static control performance alongside ergonomic support for prolonged seated work.

The global ESD Anti Static Work Chair market size was estimated at USD 780.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 6.80% during the forecast period.
