Abstracts

ESD labels are self-adhesive labels with anti-static permanent acrylic pressure-sensitive adhesive and white coating suitable for thermal transfer printing. The principle is that when the label surface material is peeled off from the backing paper, the anti-static label can prevent a large amount of static electricity from accumulating on the backing, greatly reducing the static electricity release during the labeling process. At the same time, during the use of the label, the label with anti-static function can greatly reduce the static electricity charge on the label surface, thereby reducing the probability of static electricity release.

The global ESD Labels market size was estimated at USD 329.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 9.20% during the forecast period.
