Abstracts

An ESD (Electrostatic Discharge) laminate sheet is a specialized material designed to control and dissipate static electricity. It is typically a multi-layered composite with a base material such as plastic or paper, which is treated or coated with conductive substances. These sheets have a specific surface resistivity that allows them to slowly conduct static charges to a ground, preventing the sudden and potentially damaging discharge of static electricity. ESD laminate sheets are used in environments where electrostatic-sensitive electronic components are manufactured, assembled, stored, or used, such as electronics factories, clean rooms, and data centers, to safeguard against damage caused by electrostatic discharge.

The global ESD Laminate Sheet market size was estimated at USD 1675.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 3.40% during the forecast period.
