Report Overview
An ESD-safe soldering station means that no static charge will be built on the station or the iron. Special material is used to make these units. These tools are also well grounded to discharge any unwanted electricity into the ground. A soldering station is an electronic tool for hand soldering of electronic components onto a PCB. It consists of a station or a unit to control temperature and a soldering iron that can be attached to the station unit. Most soldering stations have temperature control and are mostly used in electronics PCB assembly and manufacturing units. They are also used for mass repairing of circuit boards. Most genuine service centers also use these temperature controlled soldering stations for repair and rework jobs.
