Abstracts

The Esophageal Obturator Airway (EOA) kit is beneficially used in the management of cardiopulmonary arrest that obstructs the esophagus while simultaneously ventilating the lungs. Over the past two decades, the Esophageal Obturator airway kit is safely used in around 4 million patients and is considered to be an effective device during gastrointestinal inflation and cardiopulmonary resuscitation. The esophageal Obturator airway kit includes a mask, syringe, and airway tube with a check valve. The next or third generation of esophageal obturator airway is Combitube Airway, also known as esophageal tracheal airway or esophageal tracheal double-lumen airway. The device uses an oropharyngeal balloon inside the mouth of a facemask, sealing the end of the device, thus allowing ventilation.

The global Esophageal Obturator Airway Kit market size was estimated at USD 863.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 9.40% during the forecast period.
