The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on ESP Hot Rolled Coil competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. ISP (In-line Strip Production) technology is an innovative technology conceived at the end of the 1980s within the Group and developed and industrialised in the early 1990s on the plant built at Acciaieria Arvedi in Cremona. Continuous plant and technological development of ISP since 1992 has led to excellent results and has laid the foundations for future, even more advanced developments. In 2009 production started on the new plant based on Arvedi ESP (Endless Strip Production) technology, a direct evolution of the earlier ISP technology, which realises an epoch-making innovation: the continuous cast-rolling process. Arvedi ESP is a unique way of steel production with zero CO₂ emissions, zero fossil fuels, and the lowest energy use among all similar technologies. The Arvedi ESP process offers several advantages over traditional hot rolling methods, such as cost savings, reduced energy consumption, and improved product quality. As a result, there is a growing trend of steel manufacturers adopting this technology, leading to an increase in the demand for Arvedi ESP hot rolled coil. With the rising focus on sustainability and environmental concerns, the Arvedi ESP process has gained popularity due to its lower CO₂ emissions compared to conventional hot rolling methods. Steel companies are increasingly opting for this technology to meet their sustainability targets and reduce their carbon footprint. Emerging economies, particularly in Asia-Pacific, are witnessing rapid industrialization and infrastructure development. There is a significant demand for steel products like hot rolled coil in these regions. Arvedi ESP technology offers advantages such as reduced investment costs and operational flexibility, making it attractive to steel manufacturers in these growing markets. Companies utilizing Arvedi ESP technology gain a competitive edge in the

global hot rolled coil market. They can offer high-quality products at competitive prices, attract new customers, and potentially expand into new markets, contributing to their overall growth and success. Arvedi ESP plants are highly flexible in terms of production volume and product mix. They can easily adjust their output to meet changing market demands, enabling manufacturers to quickly respond to customer needs. Additionally, the continuous casting and rolling process significantly reduces greenhouse gas emissions and environmental impact compared to conventional mill technologies, making it more sustainable and appealing to environmentally-conscious customers. Arvedi ESP technology allows for the production of high-quality hot rolled coils with consistent thickness, width, and mechanical properties. The continuous casting and rolling process eliminates many defects commonly found in conventional hot strip mills, resulting in a more uniform and defect-free product. This high-quality output meets the stringent requirements of various industries such as automotive, construction, and appliances.

The global ESP Hot Rolled Coil market size was estimated at USD 6799.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 7.70% during the forecast period.
