Abstracts

ESP (Electric Submersible Pump) and HPS (Horizontal Pump System) variable speed drives are devices used to control and optimize the operation of pump systems in the oil and gas industry. They precisely control the flow and pressure of the pump by adjusting the motor speed. ESP drives are designed for deep well electric submersible pumps to ensure that the pumps operate efficiently under different production conditions, while HPS drives are used in surface horizontal pump systems to transport high volumes of liquid or multiphase flow. Variable speed drives improve system flexibility and energy efficiency, extend equipment life, and reduce operating costs. They are widely used in oilfield production and water treatment.

The global ESP and HPS Variable Speed Drives market size was estimated at USD 243.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.40% during the forecast period.
