Report Overview

Ester Alcohol C 16, also known as cetyl alcohol or hexadecanol, is a fatty alcohol derived from natural sources like palm oil or coconut oil, or synthesized from petroleum-based feedstocks. It is a white, waxy solid with emulsifying, thickening, and stabilizing properties, making it a key ingredient in personal care products (such as creams, lotions, and hair conditioners), pharmaceuticals (as an emollient or ointment base), and industrial applications (including lubricants and surfactants). Its biodegradability and mildness on skin have increased its demand in eco-friendly formulations. The market growth is driven by the expanding cosmetics industry, rising consumer preference for natural ingredients, and increasing use in pharmaceutical formulations. However, fluctuating raw material prices and regulatory scrutiny on petrochemical-derived variants may pose challenges. Geographically, Asia-Pacific leads demand due to booming personal care industries in China and India, while North America and Europe focus on premium, sustainable variants.
