Abstracts

The ETC device is an advanced traffic management technology that is widely used in traffic facilities such as highways, bridges and tunnels. It uses wireless communication technology to realize automatic vehicle identification and fee collection through the on-board unit (OBU) installed on the vehicle and the roadside unit (RSU) set up at the toll station, without stopping to pay, thus greatly improving the traffic efficiency. The core components of the ETC system include the on-board unit, roadside antenna, background management system and payment platform. When a vehicle equipped with an ETC device approaches a toll station, the RSU automatically reads the information in the OBU and exchanges data with the background system to complete the fee calculation and deduction operations. The whole process is fast and seamless, reducing waiting time in queues, traffic congestion and emissions.

The global ETC Devices market size was estimated at USD 9563.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.50% during the forecast period.

This report offers a comprehensive and in-depth analysis of the global ETC Devices market, covering all critical facets from a broad macroeconomic overview to detailed micro-level insights.
