Report Overview

Etched Anti-Glare Glass is made through a special chemical process. Its characteristic is that the reflective surface of the original glass becomes a matte diffuse reflective surface. It can blur the reflection effect, prevent glare, and also reduce the reflectivity and reduce light and shadow. Anti-glare products have strong surface anti-corrosion and anti-scratch properties. However, etching AG is still on the glass surface, and the product life is equivalent to that of general tempered glass. The uniformity of etched AG particles cannot be achieved by other processes. And the highest gloss of Etched Anti-Glare Glass can reach 110, and the transmittance is above 90 (etching AG does not affect the transmittance of the glass itself). Therefore, Etched AG glass will be the first choice for the high-end touch screen industry.
