## Abstracts

ETES technology (Electric Thermal Energy Storage Technology) is an energy technology that converts electrical energy into thermal energy for storage. It usually uses efficient heat exchange media (such as conversion salts, rocks, water or phase change materials) to store heat when demand is low, and converts heat back to electricity or direct heating when electricity demand peaks or energy supply is interrupted. This technology is used for grid regulation, renewable energy integration and industrial heat recovery, which can significantly improve the flexibility and stability of the energy system. ETES technology is environmentally friendly and hierarchical, which can support large-scale energy storage needs and provide key solutions for efficiently responding to energy transformation and carbon neutrality goals.

The global ETES Technology market size was estimated at USD 460.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.10% during the forecast period.
