Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Ether Brake Oil competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Alcohol ether brake fluid is a synthetic hydraulic medium with polyethylene glycol and its ether derivatives (such as diethylene glycol monomethyl ether, triethylene glycol monobutyl ether, etc.) as the main components. It belongs to the type of non-petroleum-based brake fluid widely used in automotive hydraulic brake systems. Its molecular structure connects polyol segments through ether bonds (-O-) to form a polar molecular system, which gives the material excellent lubricity, thermal oxidation stability and compatibility with rubber seals. At the same time, it has suitable viscosity-temperature characteristics and can maintain stable hydraulic transmission performance in the temperature range of -40? to 260?.

The global Ether Brake Oil market size was estimated at USD 1998.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.70% during the forecast period.
