## Abstracts

Ethernet embedded modules are compact, self-contained hardware components that integrate Ethernet connectivity, processing capabilities, and often additional interfaces (such as GPIO, serial ports, or wireless radios) into a single unit designed for direct integration into larger electronic systems or devices. These modules enable non-networked devices to communicate over local area networks (LAN) or the internet, serving as a bridge between embedded applications?such as industrial automation, IoT sensors, smart appliances, medical equipment, and automotive systems?and network infrastructure. They typically include an embedded processor, memory, Ethernet PHY/MAC, and software stack (e.g., TCP/IP), providing a ready-made solution that reduces development time and complexity for OEMs seeking to add wired networking functionality without designing custom circuitry from scratch.

The global Ethernet Embedded Module market size was estimated at USD 320.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 7.25% during the forecast period.
