Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Ethernet-over-Coax Extenders competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global Ethernet-over-Coax extender output reached about 17.8 million units, supported by an installed production capacity of roughly 21 million units, with average unit price USD 30, and manufacturers achieving an average 34% gross margin. Ethernet-over-Coax (EoC) Extenders are networking devices that transmit IP data, PoE power, and high-bandwidth Ethernet signals over existing coaxial cables (RG59/RG6/RG11), allowing users to upgrade analog CCTV or legacy coax infrastructure to modern IP networks without rewiring; the supply chain begins with upstream semiconductor components (PHY chips, Ethernet transceivers, PoE controllers, DC-DC converters), RF/coax interface components (baluns, impedance-matching transformers, surge-protection ICs), metal housings, and PCB substrates, which are supplied to OEM manufacturers who design and assemble the extenders through SMT lines, firmware integration, and compliance testing (EMC, ESD, surge); downstream, products move through distributors, security-system integrators, and installers into end-use markets such as video surveillance, industrial networking, smart-building retrofits, and transportation systems, where they enable long-distance IP connectivity over existing coax runs up to 1?3 km.

The global Ethernet-over-Coax Extenders market size was estimated at USD 520.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 7.10% during the forecast period.
