## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Ethernet-over-Powerline Extenders competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global Ethernet-over-Powerline extender output reached about 9.5 million units against an annual production capacity of 12.0 million units, with average unit price USD 65, the industry maintained a solid 31% gross margin. Ethernet-over-Powerline Extenders are plug-and-play communication devices that transmit Ethernet data through existing AC power wiring using modulation schemes such as OFDM, enabling network connectivity in locations where running Ethernet cables is impractical; they function as paired adapters that bridge LAN traffic across power circuits while maintaining encryption, QoS, and auto-negotiation features. Their supply chain begins with chipmakers producing PLC (powerline communication) chipsets, analog front-end ICs, MAC/PHY controllers, and encryption modules, followed by PCB assembly, EMI shielding, and enclosure manufacturing; OEMs then integrate power supplies, couplers, filters, and surge-protection components before performing firmware loading, certification (FCC/CE/UL), and final system testing, after which global distributors, IT wholesalers, e-commerce platforms, and systems integrators deliver the extenders to residential, commercial, and industrial networking users.

The global Ethernet-over-Powerline Extenders market size was estimated at USD 610.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.20% during the forecast period.
