Report Overview:

Ethernet switch refers to a “central hub” wired to every computer and network device in an Ethernet. In home and small office setting, an ethernet switch is built into the router. A basic ‘unmanaged’ Ethernet switch has no user configuration. It is placed in the network – the cables are plugged in and the unit is turned on which means there is nothing else to do. In contrast, for large company networks, a ‘managed’ switch can be configured to adjust speeds, combine users in subgroups, monitor traffic and report network activity.

The Global Ethernet Switching Market Size was estimated at USD 2981.60 million in 2023 and is projected to reach USD 3417.46 million by 2029, exhibiting a CAGR of 2.30% during the forecast period.
