Abstracts

Ethyl 3-ethoxypropionate (EEP) is a slow-evaporating, high-boiling-point glycol ether ester solvent with a mild, pleasant odor, widely used in industrial applications for its excellent solvency, low toxicity, and favorable environmental profile compared to traditional solvents such as glycol ethers and ketones. It serves as a key coalescing agent and solvent in coatings, paints, inks, and cleaning formulations, where it enhances film formation, flow, and leveling while reducing volatile organic compound (VOC) emissions. Its chemical stability, low water solubility, and compatibility with a broad range of resins—including acrylics, polyurethanes, and epoxies—make it particularly valuable in high-performance and environmentally compliant coating systems.

The global Ethyl 3 Ethoxy Propionate market size was estimated at USD 185.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.50% during the forecast period.
