Report Overview

Ethylene Glycol Monomethyl Ether (EGME) is an organic compound with the chemical formula $C_3H_8O_2$. It is a colorless, volatile liquid with a mild, ether-like odor. EGME is a derivative of ethylene glycol, where one hydroxyl group is replaced by a methyl group. It is primarily used as a solvent in various industrial applications, such as paint, ink, and adhesive formulations. EGME is also utilized as a chemical intermediate in the production of other chemicals, including esters and plasticizers. Due to its ability to dissolve a wide range of substances, it is considered an effective solvent for resins, cellulose acetate, and nitrocellulose. Additionally, it has been used as a component in cleaning agents and as a coalescing agent in latex paints. However, it is important to note that EGME has been classified as a hazardous substance due to its potential health risks, including irritation and damage to the central nervous system, and proper safety measures should be taken during its handling and use.
