Abstracts

Ethylene Oxide (EO) Residual Testing is a crucial process in various industries, especially in healthcare and medical device manufacturing. Ethylene oxide is commonly used as a sterilizing agent due to its effectiveness in killing a wide range of microorganisms. However, after the sterilization process, there may be residues of EO left on the sterilized products. These residues can potentially be harmful to patients and users if not properly monitored. EO Residual Testing involves the use of specific analytical methods and techniques to accurately measure the amount of EO remaining on or within the sterilized items. This ensures that the levels of EO residues are within the safe limits set by regulatory authorities. For example, in the medical field, before a sterilized surgical instrument is used on a patient, it must pass EO Residual Testing to guarantee patient safety. By conducting this testing, industries can maintain high - quality standards, protect public health, and comply with regulatory requirements related to the use of ethylene oxide in sterilization processes. The upstream of ethylene oxide residue detection is detection reagents and standard substances (ethylene oxide standards, derivatization reagents, internal standards and calibration solutions), represented by Merck KGaA, Sigma-Aldrich, Dr. Ehrenstorfer GmbH, China National Institute of Metrology, etc., which provide high-purity standard substances and test kits to support detection accuracy; the midstream is detection equipment and technical services (gas chromatography-mass spectrometry, headspace sampler, fully automatic detection system and third-party testing laboratory); the downstream is terminal application scenarios (medical device sterilization packaging, food contact materials, pharmaceutical raw materials and excipients, cosmetic containers and other fields that require strict control of residues). Typical users include medical mask/protective clothing manufacturers (such as 3M, DuPont), food packaging companies (such as Amcor, Tetra Pak), pharmaceutical companies (such as Pfizer, Sinopharm Group) and cosmetics brands (such as L'Oreal, Estee Lauder).

The global Ethylene Oxide (EO) Residual Testing market size was estimated at USD 721.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.30% during the forecast period.
