Abstracts

Ethylene Oxide Residual Testing is a specialized analytical procedure used to detect and quantify the amount of ethylene oxide (EO) that remains on or in a product after it has undergone sterilization or other processes involving the use of ethylene oxide gas. Given that ethylene oxide is a highly reactive and potentially toxic chemical, this testing is of utmost importance in industries such as medical device manufacturing, pharmaceuticals, and food processing. It helps ensure that products are safe for use or consumption by accurately determining the level of EO residuals, as excessive amounts could pose risks to human health, including irritation, sensitization, and potential carcinogenic effects.

The global Ethylene Oxide Residual Testing market size was estimated at USD 2661.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 7.40% during the forecast period.
