Abstracts

Ethylene oxide sterilizers are specialized medical and industrial equipment designed to use ethylene oxide gas to achieve sterilization of heat- and moisture-sensitive materials that cannot withstand conventional steam or high-temperature methods. These systems operate by exposing items to controlled concentrations of ethylene oxide gas under specific temperature, humidity, and pressure conditions, effectively eliminating microorganisms, including resistant bacterial spores, viruses, and fungi, while preserving the integrity and functionality of delicate devices such as plastics, electronics, optics, and certain single-use medical supplies. The process involves multiple phases?preconditioning, gas exposure, and aeration?to ensure both efficacy and safety by removing residual gas, making these sterilizers critical in healthcare, pharmaceuticals, and manufacturing sectors where aseptic processing is mandatory.

The global Ethylene Oxide Steriliser market size was estimated at USD 1580.25 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 6.35% during the forecast period.
