## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Ethylene Propylene Rubber Compound competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Ethylene propylene rubber compound is a semi-finished rubber material made by uniformly mixing ethylene propylene rubber (EPR, including ethylene propylene diene monomer (EPM) and ethylene propylene diene monomer (EPDM)) as the base polymer through a mixing process with vulcanizing agents, reinforcing fillers, softeners, anti-aging agents and other additives. Its core characteristics stem from the molecular structure of ethylene propylene rubber, endowing it with excellent weather resistance, ozone resistance, heat resistance, electrical insulation, and chemical stability. At the same time, by adjusting the ratio of fillers and additives through mixing processes, the mechanical properties and processing characteristics can be further optimized.

The global Ethylene Propylene Rubber Compound market size was estimated at USD 1598.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 2.10% during the forecast period.
