Report Overview

Ethylenediamine tetramethylenephosphonic acid is prepared by one-step synthesis of raw materials such as phosphorus trichloride (phosphorus acid is used later), ethylenediamine, formaldehyde and so on. It has strong chelating properties and can form stable complexes with iron ions, copper, aluminum, zinc, calcium, magnesium and other ions. It still has a good anti-scaling effect at a temperature of 200 °C. It is commonly used as a scale and corrosion inhibitor for industrial circulating cooling water, boiler water and power plant circulating water. It can also be used as a complexing agent for cyanide-free electroplating.
