Abstracts

Ethylhexylglycerin, or octoxyglycerin, is a glyceryl ether that is commonly used as part of a preservative system in cosmetic preparations. Ethylhexylglycerin is a globally approved, versatile and multifunctional additive as well as a very effective deodorant active. As an emollient and mild-humectant it improves the skin feel of cosmetic formulations. It reliably inhibits the growth and multiplication of odour-causing bacteria, while at the same time not affecting the beneficial skin flora. Additionally, it can boost the efficacy of traditional preservatives and acts as an antimicrobial stabiliser in combination with other cosmetic ingredients. The United States, Europe, China, Japan and South Korea are the major Ethylhexylglycerin manufacturing regions in the world. China accounts for nearly 50% of global production. In 2019, the Schulke & Mayr sales revenue of Ethylhexylglycerin accounted for 20% of the world's share. And the top five players accounted for about 55% of the world's revenue share. Personal Care is the main downstream of Ethylhexylglycerin, which accounted for about 45% of total consumption in 2019, followed by cosmetic applications, with 40% market share. Purity 99% accounts for a share of 90% in 2020.

The global Ethylhexylglycerin market size was estimated at USD 154.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.20% during the forecast period.
