Abstracts

EtO Sterilization Chamber is an enclosed space or device specifically designed for sterilizing medical equipment, surgical instruments, and other items that require strict sterilization. EtO, which stands for ethylene oxide, is the primary sterilant used in this chamber. The process involves exposing the items to a controlled atmosphere of ethylene oxide gas, which effectively kills bacteria, viruses, fungi, and spores. The chamber maintains specific temperature, humidity, and gas concentration levels to ensure complete sterilization without damaging the items being processed. After the sterilization cycle is complete, the chamber is purged of residual EtO gas to ensure the safety of the sterilized items for use.
